

CASE STUDY:

Keeping FedEx Employees Safe During COVID-19

PROJECT PARTNERS: FedEx Ground

BUILDING USE: Provide secure, safe COVID-19 testing stations for FedEx ground employee

The Challenge

Since 1973 FedEx Ground has provided countless companies and individuals with reliable package shipping and delivery the world over. In the midst of today's global pandemic, the company is challenged to maintain business continuity and ensure the safety of both employees and customers.

The Solution

To protect the health and safety of its ground employees, and thereby limit the potential to contaminate packages, FedEx set up on-site COVID-19 testing areas at distribution centers. To accomplish this, FedEx turned to Mobile Modular Portable Storage for options.

We provided FedEx with our office units and placed them in a separate location off the main facility property to create a controlled environment. To streamline the testing process, employees entered through a door on one side and exited out the other, improving efficiency and limiting contact with other employees. Should an employee test positive, the portable office units provided a quick and easy quarantine solution.

In addition to functioning as testing stations, our customizable office units are ideal to store:

- Medical supplies
- COVID-19 testing kits
- Personal protective equipment (PPE)
